Art Unit: 3632

This is the fourth office action for serial number 09/368,011, entitled Universal Fixture and Base Threrfor, in response to Amendment filed on August 13, 2002

Allowable Subject Matter

The indicated allowability of claims 1-17 is withdrawn in view of the newly discovered reference(s) to Stafford. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Art Unit: 3632

Claims 1-3, 5-13, and 45 are rejected under 35 U.S.C. 102(e) as being anticipated by Stafford 6,168,126. Stafford discloses a system comprising a set of support brackets (36) with a thru hole (40) and a fastener (60), a base (14) with a threaded aperture (26 and 28) with a first support member (16) with a shaft (46), and a threaded coupling (44) welded to the shaft, a first threaded connector (50), and a threaded rod (18, threaded at 76) with a second end (near 72) and a first end (near 76), a housing (20) having a channel (86), and a housing coupling (84) which is threaded and welded to the channel, means for securing (threaded hole 72) the second end of the rod (18) to the housing coupling (84), a second support member (96) coupled to the housing (20), wherein the second support member includes a shaft (104) having a coupling joined thereto (108).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stafford 6,68,126 in view of Dugas 4,717,131. Dugas teaches that it is known to have an elongate body (30), a first and second set of support brackets (40 and 42), a connector with flared handles (46) and a threaded aperture (35). Stafford discloses all of the limitations of the claimed invention except for

Art Unit: 3632

the connector including a pair of flared handles. It would have been obvious to one having ordinary skill in the art at the time of the invention to have modified Stafford to have included the flared handles of a connector as taught by Dugas for the purpose of facilitating removal and insertion of the connector.

Allowable Subject Matter

Claims 14-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 22-24, 26, 38, 40 and 41 are allowed.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
